Project discovery

Defining requirements together

The initial stage in the project lifecycle that focuses on understanding and defining the project's objectives, requirements, and constraints - a crucial foundation for successful project planning and execution.

During the discovery phase, project stakeholders, including the client and the project team, collaborate to gather essential information, align expectations, and clarify project scope.

Fixed price projects

With clearly defined scope

A fixed price project is a structured engagement where the scope of work, deliverables, and timeline are clearly defined from the outset.

This pricing option is ideal for clients who have a specific project in mind and require a predictable cost.

Flexible price projects

For evolving scope

A flexible price project, also known as a time and materials project, offers greater adaptability and customisation in terms of scope, deliverables, and timeline.

This pricing option suits clients who require more flexibility or have evolving project requirements. Once the project requirements become clear, the project can move to a fixed price project structure.

Projects

Pricing for projects is on a per-project basis due to changing variables in size, features and integrations.

Lite

Low monthly usage

30 hours per month

Commitment period

6 months	\$7.2k/month
12 months	\$6.9k/month
